carbon and <u>said particles of a thermoplastic binder form a</u> single, composite structure [said first surface].

- 19. The <u>substrate</u> [web] of claim 18 [comprising, in addition], <u>wherein said single</u>, <u>composite structure is fused to</u> [a second substrate web having] a second surface <u>on a second substrate</u> [spaced from said first surface and fused to said thermoplastic binder].
- 24. A first substrate [web] having a first surface upon which is deposited a composite powder consisting [mixture] of at least one particulate polymer liquid absorbent and particles of a thermoplastic binder, wherein [fused to both of] said particulate polymer liquid absorbent and said particle of a thermoplastic binder form a single composite structure [and said first surface].
- 25. The <u>substrate</u> [web] of claim 24 [comprising, in addition], <u>wherein said single</u>, <u>composite structure is fused to</u> [a second substrate web having] a second surface <u>on a second substrate</u> [spaced from said first surface and fused to said thermoplastic binder].
